From TeX Users Group : TeX's 25 Anniversary** before purchasing it in order to gage whether or not it would be worth my time, and all praised TeX's 2**5 Anniversary:

The typesetting system TeX, invented by Donald Knuth, is thirty-two years old in 2010. For this anniversary, a commemorative book has been prepared containing example papers by Knuth and the Stanford graduate students who

helped develop TeX. These papers all were selected from the TeX Users Group's TUGboat journal archive.
